An airtight gasket
prevents air leakage

The X2 Split Rim

Introducing the

X2 Split Rim

“A specially designed rim for easy tire replacement”

TARGET MARKET:

- Home mechanics
- Do it yourself enthusiasts

FEATURES:

- Two part rim allows for easy tire install
- Allows for mounting of tires with minimal tools.

PATENT INFORMATION:

A provisional patent application was filed in January of 2020. The Mars Rising Network performed the patent search and concluded there is nothing similar to this product on the market, which means this unique device could be patented and used everywhere.

SUMMARY:

Working on your own automobiles at home can be a gratifying experience. It saves a great deal of expense and you know that it is done correctly. Unfortunately, there are times when you need to have a procedure done at a shop that you should be able to do yourself. One of those procedures is having a tire put on a rim. Well, now you can do this yourself with ease.

Introducing the **X2 Split Rim**. The X2 Split Rim will allow you to change a tire at home, with less trouble than a tire changer. This system will allow you to buy tires online and choose the tires you want at competitive online prices.

The **X2 Split Rim** is a new type of wheel that is actually two main parts that are secured together through both sides of the tire. At the center where the two parts meet there is a gasket which prevents air leakage. After filling the tire with air, you then balance your tire, then reinstall the wheel back on the vehicle and you are done.

Home mechanics will immediately see the usefulness of the rims as it saves many time consuming trips to service centers. With an inexpensive tire balancing device available from Walmart.com™ and many other stores, this invention provides the needed step for complete home tire replacement.

The possible use of bolts to secure both parts of the rim would add decorative appeal to the design.

The global automotive wheel market was valued at \$30.011 billion in 2017 and is projected to reach \$47.3 billion by 2025.

About the Developer

Jose De La Torre has developed an idea for a simple but effective solution. With this invention many home mechanics will be able to change a tire without taking it in to a shop. He then contacted the Mars Rising Network and had a provisional patent application filed. Working with Mars Rising Network, he had the invention refined with the hope of turning this great idea into a real product. He is actively seeking a company that would have an interest in partnering with him to get this product on the market.
