Forget-Me-Not Alarm

Introducing the

Forget-Me-Not Alarm

“An automated alarm to remind us of children being in the car”

TARGET MARKET:

- All parents, grandparents and caregivers.
- Can be expanded for the pet market as well.

FEATURES:

- Alarm reminds you that children are in the car.
- Fits in any standard air vent.
- Battery operated.

PATENT INFORMATION:

A patent application was filed in May of 2020 and is in patent pending status.

SUMMARY:

We have seen it on the news, a parent or grandparent has a baby in the car and they forget the baby is there. This is still a huge problem that needs to be addressed in this day and age. No one intends to leave their child in the car or thinks they will ever do it until its too late. All it takes is a split second distraction for you to forget a sleeping baby in the backseat. God forbid it's on a 100 degree day.

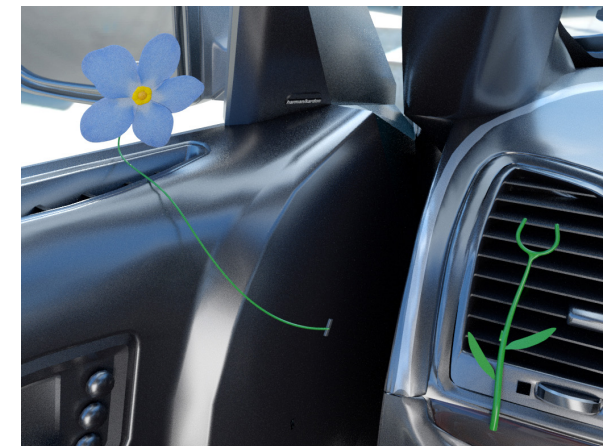

This is where the **Forget-Me-Not** comes in. This simple device reminds us the moment we open the car door when we arrive.

It is a device in the shape of a flower (Forget Me Not flower) with the stem “base” that clips into the car vent. The flower head detaches and

sits on the driver side window. It connects to the driver-side window with a suction cup on the back. It acts as a visual reminder to the parents. If the flower is not restored to the stem or base (once you reach your destination), the cord that connects the two (flower head and stem) will detach once the car doors open and an alarm will remind the parent with a loud audible beeping sound.

The device is simple, made from silicone and plastic and powered by a small circuit board and battery.

Other products alert you once you are 15 ft away from the car from your key fob. Unfortunately people throw their keys in the diaper bag or coat pocket and may not hear it. The **Forget-Me-Not** sounds from within the car right in front of the driver so you are unable to ignore it before you get out of the car.

About the Developer

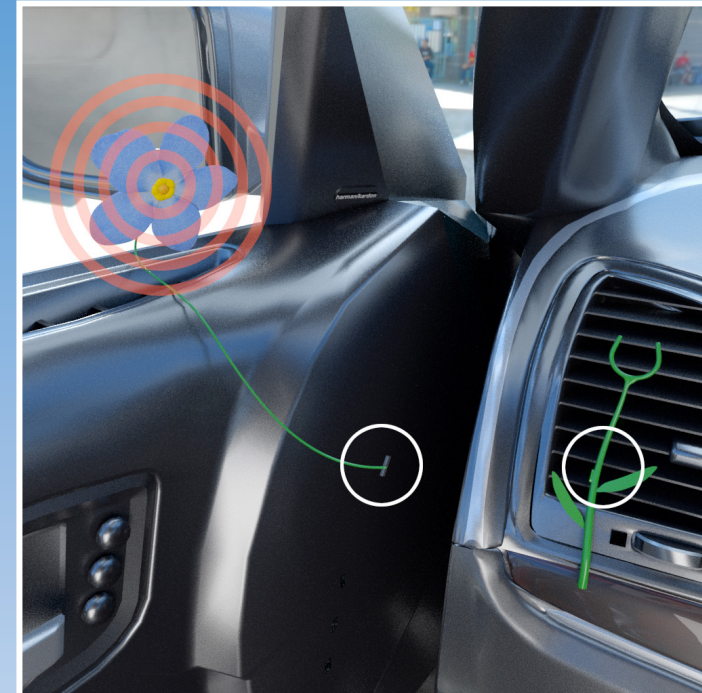

Emily Hossann of Sparrow Bush, NY, like most of us has heard of the horrors of leaving a child in a car. It happens too often and can happen to anyone. So she set out to solve the problem and has worked out a very effective solution. Working with Mars Rising Network, she had the invention refined with the hope of turning this great idea into a commercial product. She is actively seeking a company that would have an interest in partnering with her to get this product on the market.
