Shelly's Shoe Sanitizer

Introducing

Shelly's Shoe Sanitizer

"Time to stop tracking in germs and viruses from outside"

TARGET MARKET:

- Homes
- Businesses that serve food.
- Anyone that is concerned about bringing in germs and viruses from outside.

FEATURES:

- Compact size that fits by the front door
- Made of durable hard plastic and metal runners
- Replaceable brushes and cleaning pads
- Different cleaning solutions can be used

PATENT INFORMATION:

A patent application was filed in August of 2020 and is in patent pending status.

SUMMARY:

Keeping a house protected from germs and viruses in these times is quite a project. We clean surfaces that people touch and use masks when necessary but what about the ground/floor? We can't mop several times a day. The solution is of course to stop these

unwanted invaders at the door.

Introducing **Shelly's Shoe Sanitizer**. This is a device that you keep by the door and everyone cleans their shoe soles as they come in.

The process is simple, you put your shoe on the solution pad that has a sanitizing solution in it, next you step on the brush section. In between the brushes are metal supports that are pressure sensitive and turn on the brush motors for a short time. In addition to the sanitizing, these brushes also remove grime from outside as well. The brushes have a clear guard about them to catch any excess liquid.

Once brushed thoroughly, the shoes are pressed against the drying mat and the process is repeated for the other shoe.

The pads sit in compartments that can hold different types of solutions as you may not always need sanitizing but simply thorough cleaning. The pads are replaceable and come in multi-packs.

Being safe and healthy today requires some work but the **Shoe Sanitizer** helps make it a little easier.

About the Developer

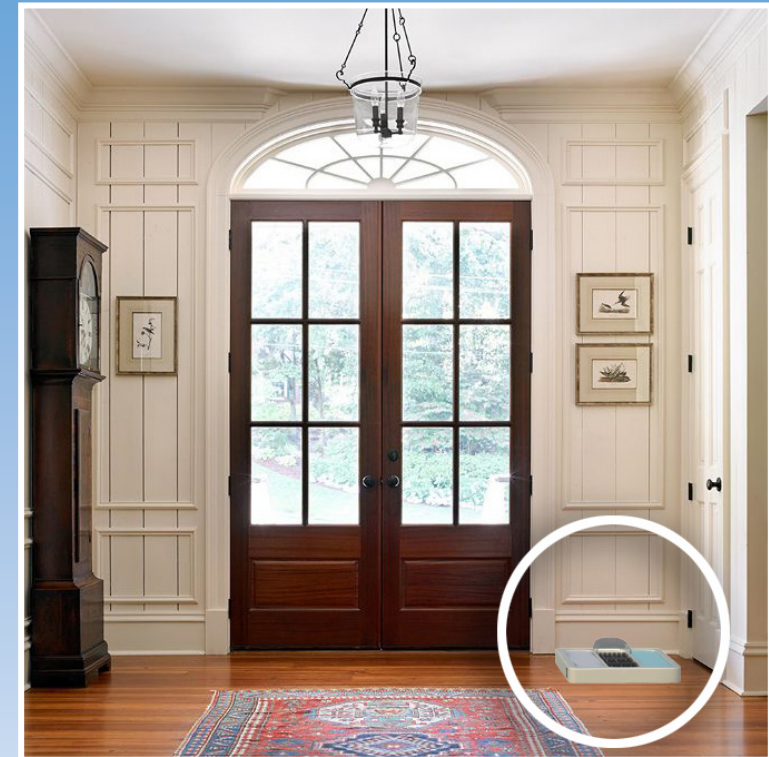

Shelly Coats of Penngrove, CA, like most of us is concerned about the spread of germs and viruses that can be harmful to our friends and family. We wash our hands and cover our faces but what about our shoes? She came up with a solution and worked with The Mars Rising Network to have the invention refined with the hope of turning this great idea into a commercial product. She is actively seeking a company that would have an interest in partnering with her to get this product on the market.
