The Leaf Stopper

Introducing

The Leaf Stopper

“No more rake ends getting bent out of shape!”

TARGET MARKET:

- Homeowners with trees and grass
- Professional landscapers

FEATURES:

- Simple device that is easy to attach/remove
- Keeps rake splines from separating
- Additional scoop catches finer objects
- Can be cut to fit any size standard rake

PATENT INFORMATION:

A patent application was filed in April of 2021 and is in patent pending status.

SUMMARY:

As anyone that has ever had to rake up leaves knows well, rakes can be finicky. The splines separate and worse bend leaving gaps that the leaves fit through. This requires constant re-bending and straightening. The **Leaf Stopper** puts an

end to that. It is a simple straightforward device that is easily trimmed to fit most common rakes on the market today. Once sized, it fits right onto the ends of the rake and keeps them perfectly spaced. No more splitting up just because an object was too big or heavy.

The optional scoop fits on the handle and is adjustable with a thumbscrew for custom placement. The scoop is very handy for smaller leaves, fine gravel or even slushing materials that would have been impossible before.

If your rake eventually wears out, you can simply move the Leaf Stopper to another one as neither it nor the scoop is permanently attached.

According to Ibisworld.com analysis, The market size, measured by revenue, of the Landscaping Services industry is \$105.1bn in 2021. The market size of the Landscaping Services industry in the US has grown 2.5% per year on average between 2016 and 2021.

About the Developer

The inventor, Robert McQuade of Millville, NJ had an idea for a better way to keep rakes from constantly clogging due to bending and separating of the rake ends. He created and improved his prototype and came up with a streamlined, effective device. Robert contacted the Mars Rising Network and had a provisional and design patent application filed and had the invention refined so that he may see success with this great idea and turn it into a real product.

He is actively seeking a company that would have an interest in licensing the product for a royalty..
