

Introducing the

Microwave Heating System

“Fast efficient heating”

TARGET MARKET:

- Buildings and vehicles.

FEATURES:

- Generates heat quickly, safely, and efficiently.
- Unlike heat pumps, virtually all electricity generates useable heat and continues to work at extremely cold temperatures.
- Versatile—Can be used in cars or trucks, replace furnaces, or room heaters, and more.

PATENT INFORMATION:

A patent application was filed in April of 2021 and is in patent pending status.

SUMMARY:

The **Microwave Heating System** is a small contained unit that is used for fast, efficient heating.

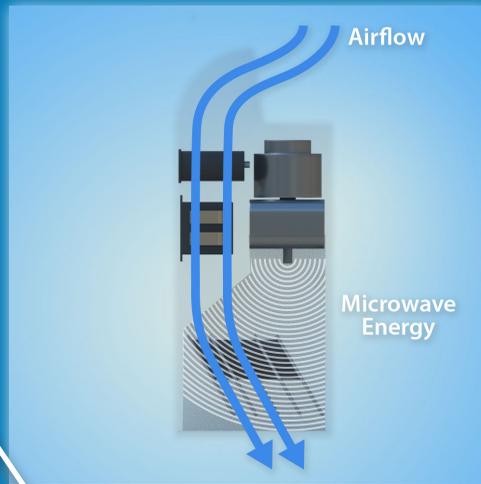

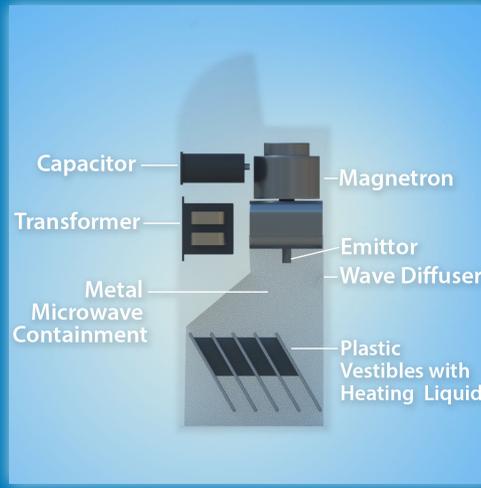

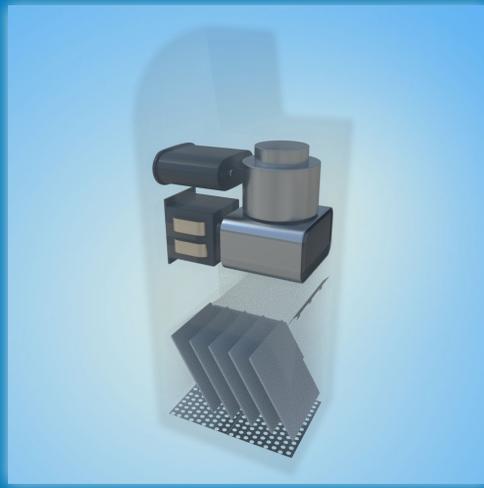

It works similar to consumer microwave ovens. Microwave ovens can be used to heat oil and can attain far higher temperatures than that of boiling water.

This device's purpose is to create heat quickly and compactly using microwave energy. It works by forcing air over microwave headed oil. The beam is contained in a metal duct and emits the beam at several thin flat glass, ceramic, or plastic plates or fins that are filled with oil. As the oil heats up, air is brought across them from outside the device. The heated air is directed where needed.

This solves the issue with heaters that emit gasses or have exposed heating wires which may lead to terrible accidents.

It can safely warm electric vehicles while still charging and allow increased range after driving.

It can be relatively small and used throughout homes or vehicles where space is limited. It can also be used in older buildings where vents are limited or non-existent. Being small and using standard power, they can be put in several areas. RV's and other large vehicles will find the Microwave Heating System invaluable when in extremely cold areas and quick clean heated air is needed.

The small size of the unit makes it possible to install in many vehicles.

About the Developers

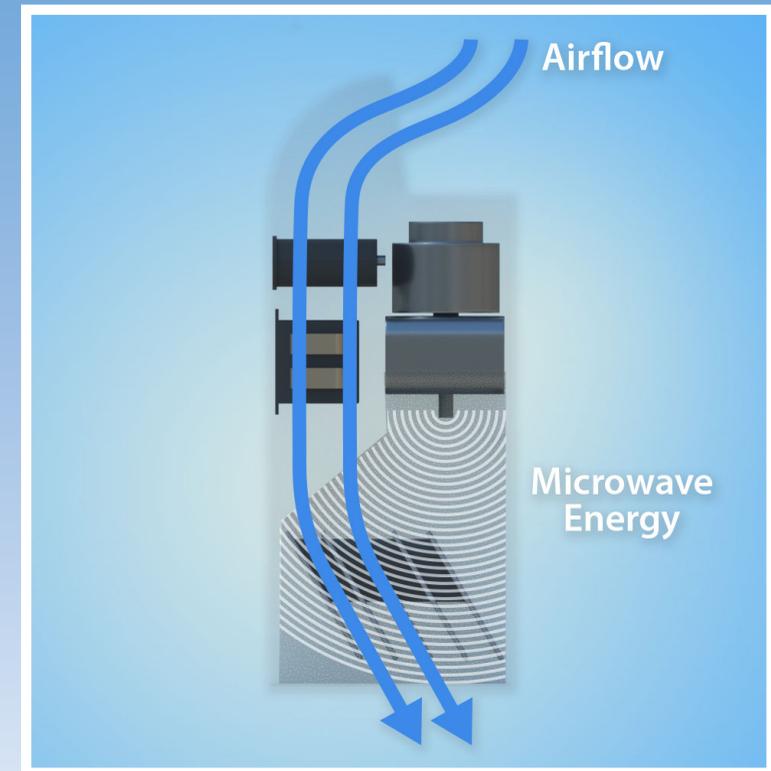

Gary Kerr and Perry Tollet are inventors and are always looking for ways of improving things. With news reports on horrible events pertaining to space heaters and other similar devices they realized there is a better way. They worked up a solution and it proved to be quite effective. Working with Mars Rising Network, they had the invention refined to prepare this essential new design into a commercial product. They are actively seeking a company that would have an interest in partnering with them to get this product on the market.
