

Introducing

ZipNut

“A new type of nut that secures bolts of various diameters”

TARGET MARKET:

- Mechanics
- Homeowners

FEATURES:

- Quick lightweight solution
- Fits multiple diameters
- Works on bolts and screws
- Works regardless of thread direction

PATENT INFORMATION:

As of March 2023, a provisional patent has been filed. Mars Rising Network performed a patent search and concluded there is nothing similar to this product on the market. The opportunity for patent is strong and this unique device's wide range of potential target markets projects a robust chance for sizable market penetration in multiple markets.

SUMMARY:

The **ZipNut** is an alternative solution for a nut on a bolt. The main advantage is that it can fit many sizes of bolts where common bolts must be exact for each bolt. It will con-

tour to the bolt as it is being pushed/threaded through.

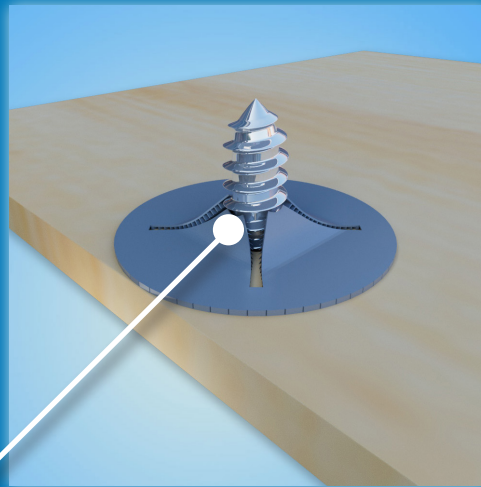

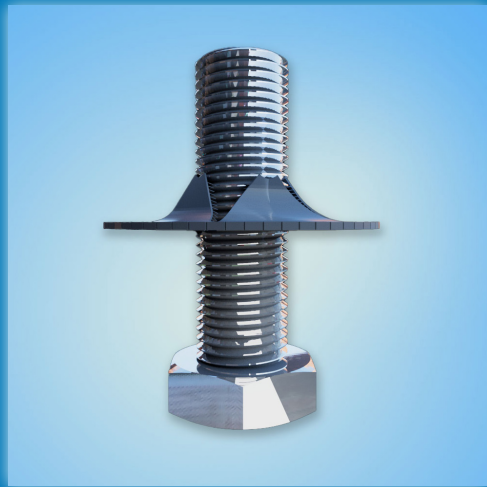

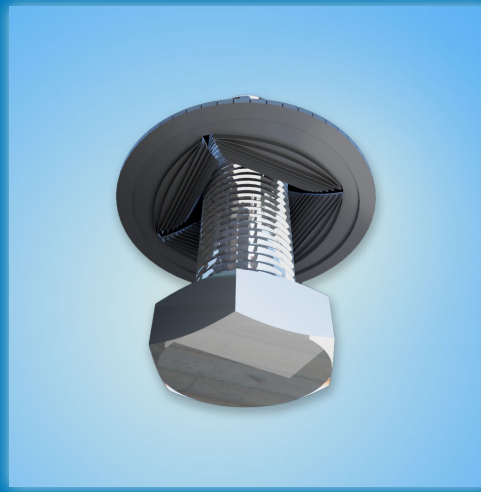

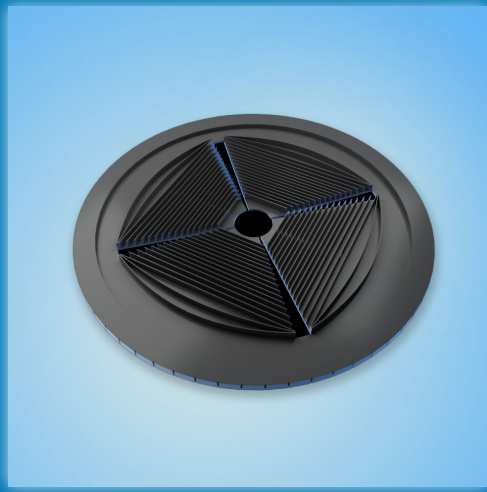

It is light and flexible but still strong enough to hold a bolt in place. It has serrated edges on the outside rim to help hold it from slipping while being mounted.

In the center there are 4 vanes, each with approximately 15 protruding fins that feed into the bolt or screw's threads. The vanes are flexible and this helps the fins grip the bolt threads. It can be plastic or metal depending on the strength needed.

It has many advantages in addition to working with multiple diameter bolts, it also works with screw as well. Since the ZipNut conforms to the bolt or screw, it works with threads that wind clockwise or counter-clockwise.

The plastic version of the Zipnut can handle lightweight projects like hanging cups on hooks in a pantry and the metal version is well suited for heavier duty such as holding materials together.

Any toolkit would benefit having several sets of Zipnuts to cover almost any purpose.

Can be used for bolts or screws.

About the Developer

Gordon Stout, of Midlothian, TX developed an innovation solution for a lightweight nut that can be used to replace several sizes of regular nuts. Gordon contacted the Mars Rising Network and had a provisional and design patent application filed and had the invention designed properly so that he may see success with this great idea and turn it into a real product.

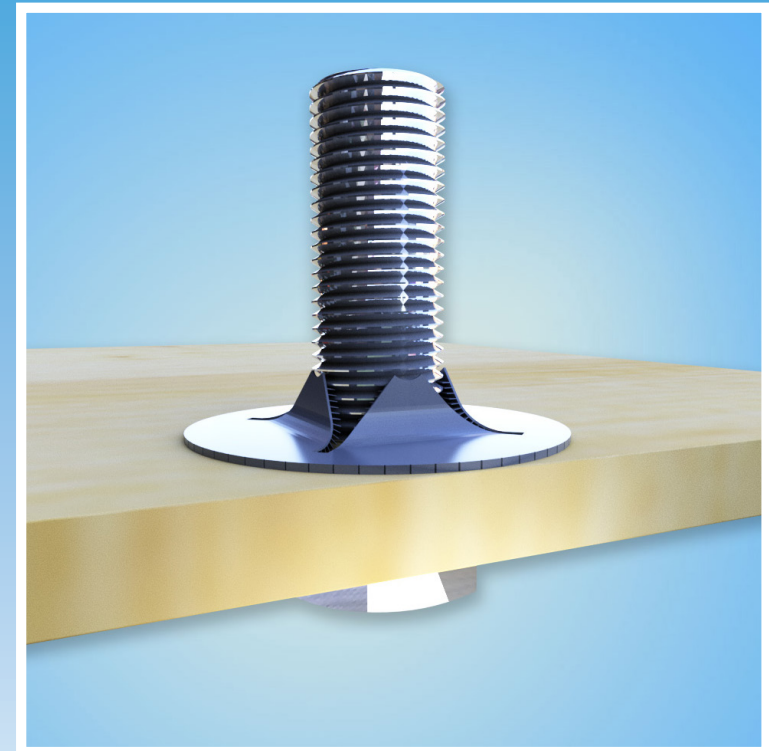

He is actively seeking a company that would have an interest in licensing the product for a royalty.
