

US Air Purification System

Introducing

US Air Purification System

“Lets get the air back clean like how it use to be”

TARGET MARKET:

- Residential
- Commercial
- Industrial

FEATURES:

- 2 activated carbon filters
- Dual Turbine Fans
- Tall stainless steel design

PATENT INFORMATION:

A provisional patent was filed and it is in patent pending status.

SUMMARY:

The US Air Purification System would stand many stories tall starting with a cement base for stability. On top of that cement base would be the main metal base housing of the filter system that holds up the upper structure. The base would possibly also have elevator access for workers to easily use for any repair work. Above the main base would be your long cylinder connector pieces that connect many stories tall for the air to be cleaned at higher levels. At the top of the long cylinder

connectors would be your Air Purification System that does all the cleaning. Housed inside would be your jet-like vacuumed powered fan that would pull in all the polluted and unfiltered air through. Behind the fan would be your 2 chambers of carbon filters that would clean the polluted air coming in and leaving nothing but the purified air going out the other end. On top of the Air Purification System would be the wind directional sensor that would aim the filter chamber in any direction the wind is coming from, leaving no area untouched. This system may also have a locking device for what ever direction is needed. On the exiting end would be the aviation obstruction light to enhance the visibility of the Air Purification System when aircrafts are in flight. All envisions this system to be used in many areas around the world and get the air back clean to how it use to be.

About the Developers

One day my mother and I went fishing and it was the day that I caught a large fish. I couldn't believe it, we had fun that day . I mentioned today is a clear sunny day, and she replied it used to be clearer than that when she was a little girl, so I thought to myself what it would be like if I can see the sky like that how she was looking at it what it would look like. I always wondered what could be done about that. So as time went on I was fascinated with the paper towel roll in the tissue roll. So I put two tissue rolls together with tape and then I taped it on the paper towel roll and I stood it up but I didn't know what I was having at the time, I called myself making a telescope. So as time went on I kind of forgot. So as a teenager I noticed we were having a lot of storms and I always said the sky is polluted, it's dirty it's making the world sick that's probably the reason why where're having a lot of storms. So one day I had a vehicle that was putting out pollution and I was eager to get rid of it as quick as I bought it because I didn't know how to fix it and soon as got rid of it I went for a walk, and I feel good about walking and breathing fresh air. So I thought the air is fresh but it was much better than what I was smelling in the car with a lot of carbon monoxide. But while I was walking I picked up a cigarette butt and held it up, it seem like my finger was the napkin roll and a cigarette butt was the two tissue rolls and I thought to myself oh my God this is what you wanted me to pick up because I kept wondering why am I seeing all these cigarette butts and knowing I would've kicked them out of my way, but I had the feeling that God was telling me to pick it up and when I picked it up I asked him what God and that's when it hit me. That's when I knew what I was going to build at least sketch it on paper but I Heard a voice said be quiet close your mouth and I never said nothing about it and that's when I knew I had something to do that was going to be great.
