

Introducing the

Universal Outlet System

“Switching out Outlets is a Breeze!”

TARGET MARKET:

- Homeowners
- Businesses with changing design needs.

FEATURES:

- Easily interchange outlets and switches.
- No screws needed.
- Wires are safely out of reach.

PATENT INFORMATION

A provisional patent application was filed in August of 2019. The Mars Rising Network performed the patent search and concluded there is nothing similar to this product on the market, which means this unique device could be patented and used everywhere.

SUMMARY

This revolutionary new system is designed to replace typical house wiring with a safer easier method. It's purpose to create a universal pluggable method throughout the homeowners house without the need of dealing with dangerous high voltage wires or having to use screws. Once the framework is installed inside the walls and/or attic by an electrician, the wall boxes are ready to accept any on dozens of types of switches that have the new safety type connection.

For example, if a homeowner has a dual plug outlet but wants to change the outlet so that it has USB chargers also, they simply pop the old one out and push the new one with USB into the empty wall box with a click. In addition to the many types of outlets, dimmers, sound controllers, and intercoms, they can also switch out ceiling and wall lamps with the same connectors. It is a complete system that starts outside the home as the power comes from the street. It then goes to the custom circuit breaker, which then goes to junction boxes throughout the house. These junction boxes then go to the various wall box locations where the outlets will be used.

The shielded male/female pin system on the back of the switches prevent someone from touching any wires while simultaneously guiding the socket in in just seconds.

Homeowners will want to add many more boxes when initially doing the install as you can have dual boxes and when not in use blank boxes can be used to cover the space.

The average homeowner will often find that they don't have enough options to decorate their house the way they want. Now, they can easily add different options for different functions as well as different colors.

With the **Universal Socket System** people will now have almost unlimited options to design their home.

About the Developer

Claudio Fernandez is an inventor and designer. His idea for the Universal Outlet System has been in the works for some time. After much refining of the design and usability, he now has the concept ready to go. He decided to take his idea to the next step and contacted the Mars Rising Network and had a provisional patent application filed. The invention has been thoroughly designed so that he may see success with this great idea and turn it into a world-wide product. He is actively seeking a company that would have an interest in licensing the system for a royalty.
