The Sun Shutter™

Introducing

The Sun Shutter™

“Keeping your car cooler has never been easier or more effective”

TARGET MARKET:

- Any vehicle owner
- Auto & Truck manufacturers

FEATURES:

- Built into frame to be visually invisible when not in use.
- Can be activated with on-dash button or key fob.
- Easy to use.

PATENT INFORMATION

A provisional and design patent application has been filed as of June 2018. The patent search was performed by The Mars Rising Network. It was concluded that there is nothing similar to this product on the market, which means this unique device could be patented and used by people anywhere.

SUMMARY

Keeping your car from becoming an oven when left in the sun has been a age-old problem. In most states you aren't allowed to tint the windshield which means using clumsy cardboard or foil shades to block the sun's rays.

Not only are these awkward to put up but they take valuable space when not in use.

The answer is the **Sun Shutter™**! This innovative product is built into the side window frames and is activated with a button on the dash or key fob. The side panels open up and the shutters guide out along a built-in rail. Each blade is connected together in an accordion fashion with a pin along the button that is pulled by a belt. The two sets of blades (one in each support column) meet at the middle around the review mirror completely closing the light, heat and UV radiation (which is responsible for cracking the dash)

The Sun Shutter™ is something that could benefit any vehicle owner. Leaving your car in the sun can cause inside temperatures much higher than outside. It can easily reach over 150° which is not only unhealthy for you and your pets but a strain on the vehicle's air conditioner as it struggles to cool you off.

The Sun Shutter™ also prevents easy viewing of your belongings as well. The shutter blades are very thin but aluminum, preventing any light getting through.

When not in use the shutters retract back into their respective holding compartments, the cover doors close and the Sun Shutters disappear from view.

About the Developer

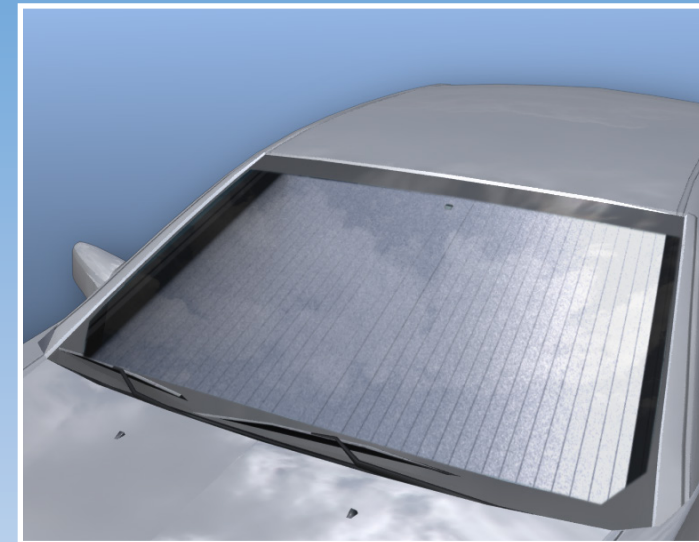

The inventor, LaConstance McKinnon of Miami, FL had an idea to take the inconvenience out of keeping your car cool when left in the sun. Make it automated with the push of a button! LaConstance contacted the Mars Rising Network and had a provisional and design patent application filed and had the invention designed properly so that she may see success with this great idea and turn it into a real product. She is actively seeking a company that would have an interest in licensing the product for a royalty.
