

Introducing

Drezz EZ™

“Avoid the shoulder pain associated with putting on a shirt or blouse”

TARGET MARKET:

- Anyone with shoulder injuries that make it difficult to raise their arms above their shoulders
- People that have had recent surgeries in the upper chest area

FEATURES:

- Open shoulders that allow you to step into the garment.
- Easy to open and close Velcro™ flaps.
- Comes in many different styles.

PATENT INFORMATION

A provisional and design patent application has been filed as of June 2018. The patent search was performed by The Mars Rising Network. It was concluded that there is nothing similar to this product on the market, which means this unique device could be patented and used by people anywhere.

SUMMARY

Drezz-EZ™ is a conforming garment design that allows the user to put it on without the difficulty or experiencing pain. The main reason for its special design is to allow a patient to recover from a condition that immobilizes

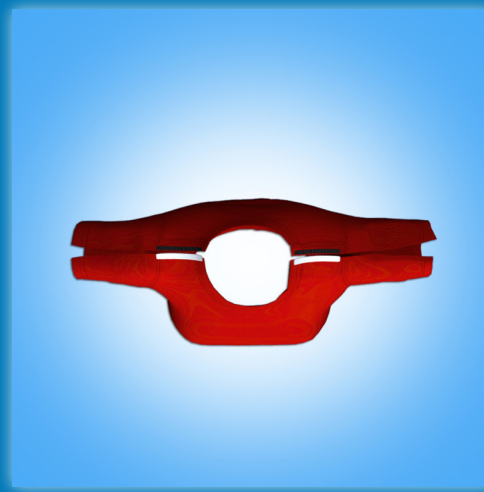

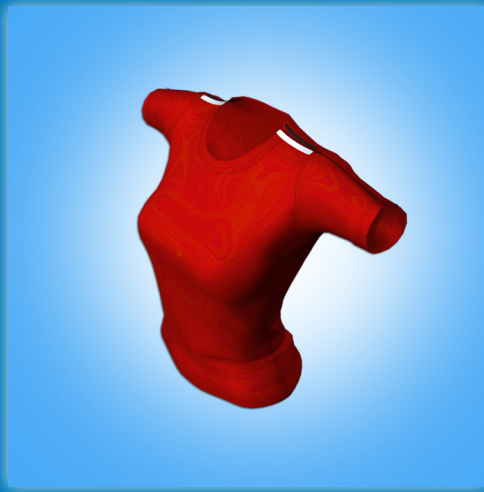

the shoulder, making it very difficult to dress because many garments require lifting arms above the shoulder or moving the arms away from the body.

The **Drezz-EZ™** garment is a relief to anyone who may experience pain due to an injured or immobilized shoulder.

- Breast Augmentation or Reconstruction,
- Mastectomy,
- Clavicle Fracture,
- Neck Dissection,
- Rotator Cuff Surgery

In this garment, the opening begins at the collar and ends at the sleeve, preferably a short sleeve. The slit opening is fastened by Velcro™ strip sewn from the collar to the shoulder seam. Leaving the slit open on the sleeve from the shoulder seam to the end of the short sleeve for comfort if swelling occurs, easy access for physical therapy and physical exams of the shoulder at the doctor's office.

With the slit on the shoulder, the garment is opened from the top, stepped into, and slid up. Sliding the uninjured arm into the garment's armhole and placing the side with the slit over the injured shoulder and fasten it closed. Sliding the garment up after stepping into it keeps the injured or repaired shoulder from moving by pulling it over the shoulder, minimizing and or preventing pain.

About the Developer

The inventor, Rosemary Salazar of Lubbock, TX had an idea to help women with upper body injuries or pain that have difficulty dressing. Rosemary contacted the Mars Rising Network and had a provisional and design patent application filed and had the invention designed properly so that she may see success with this great idea and turn it into a real product. She is actively seeking a company that would have an interest in licensing the product for a royalty.
