Embedded chip makes it easier  
to find when card is lost

The Find-it Pull-Tabs™

Introducing the

## Find-It Pull Tabs™

“An easier way to get your cards out”

### TARGET MARKET:

- People who lose or leave cards or IDs
- People that have difficulty removing cards or IDs from tight wallets when needed.

### FEATURES:

- Easy to apply and use plastic color tabs.
- RFID chips for finding with a smartphone.
- Tabs have Braille impressions for people with vision impairment.

### PATENT INFORMATION

A provisional and design patent application has been filed as of October 2017. The patent search was performed by The Mars Rising Network. It was concluded that there is nothing similar to this product on the market, which means this unique product and app could be patented and used by people everywhere.

### SUMMARY

The **Find-it Pull-Tabs™** and App are a unique combination which allows a person to easily remove/pull out IDs and credit cards and to quickly, and easily, find these items near them. RFID chips have been around for quite some time and are now relatively inexpensive to use. These chips give off a special wave and have a

unique code which the App would be able to trace once put in. They also don't require any battery source which is great for this type of invention.

The Pull Tab part of the invention is simple; it is a small tab which is flexible and holds the RFID chip inside of it. Since the chips are also flexible it doesn't cause any issues. The color-coded tabs are adhered to the card by two adhesive flaps that keep it secured and attached. The Tabs come in many different bright colors and have Braille impressions for those with vision impairment.

Once the tab has been placed on an item, simply input the unique code which came with the device into the App. The app can accommodate multiple tabs in the event you have more than one object you need to keep track of often. Once all the codes are placed in, just hit the “Next” button and the radar screen will show up. Each object with a tab will be actively tracked in real time within the proximity of your location. The little dot in the center is you, and just like a real radar system it will scan in a circular pattern displaying any of your tabs that are in the area. Keep your most important object close and never lose track of them again with the Card Pull Tab Finder and App.

#### **About the Developer**

The inventor, Manita L. Hayes of Round Rock, TX had an idea to make it easier to remove IDs and credit cards from wallets while also helping to find them when lost. Manita contacted the Mars Rising Network and had a provisional and design patent application filed and had the invention designed properly so that she may see success with this great idea and turn it into a real product. She is actively seeking a company that would have an interest in licensing the product for a royalty.
