

Introducing the

MedHouse™

“Taking the complexity out of taking medicine”

TARGET MARKET:

- Ideal for those on multiple medications.
- Those with family members that may need help with daily medicine reminders.

FEATURES:

- Digital keypad to secure your medications.
- LED display for reminders and medication countdowns.
- “BPA Free” clear plastic containers with high quality “Food-Grade” silicon lids.

PATENT INFORMATION

A provisional and design patent application has been filed as of November 2017. The patent search was performed by The Mars Rising Network. It was concluded that there is nothing similar to this product on the market, which means this unique product could be patented and brought into people's homes.

SUMMARY

Taking medication can be challenging as we get older, since our medical conditions become more complex as we age, and the number of medications we take increase as a result. This includes prescription medications, over-the-counter drugs, skin creams and eye drops. The **MedHouse™** alleviates the stress of disorganized medicine bags or bathroom cabinets cluttered with medication!

It's unsafe to keep medication stored in a place that isn't temperature controlled or gives way to the possibility of moisture inside

of prescription bottles. The MedHouse™ takes away that worry with its thick, moisture repelling lined doors that keep medicine cool and dry.

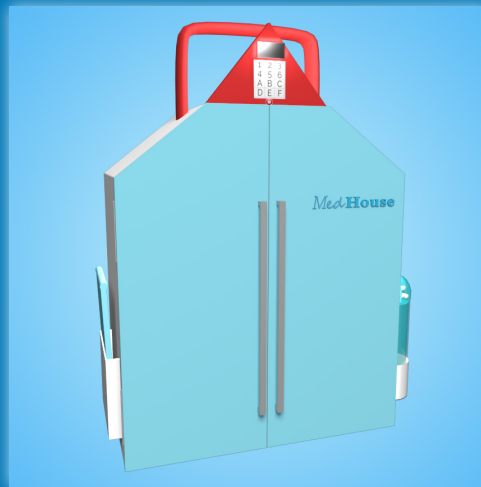

Forget when your medicine is due to be taken? Don't worry! With the MedHouse™ the guesswork is taken away with a built in digital alarm clock that can be set to remind you when to take your medicine. And with the additional alert light that lights up above the sealable pill containers, you'll know exactly what pill compartment to grab!

MedHouse™ is light and portable with its easy to grab handle, or can be mounted on any wall with the wall hang brackets located on the back. Keep all of your prescriptions in one place no matter the size! The labeled drawers of the MedHouse™ are built big enough to accommodate bottles and containers of all sizes, and are labeled with large, easy to read text so that there's no confusion. And your medicine will stay safe with the keypad feature that allows a patient or caretaker to set a code to lock your medicine away safely and securely.

The medical notepad on the side of the device allows you to keep a complete medication list to share with all your healthcare providers and allows caregivers or doctors to note down proper prescription usage or any other pertinent details the patient or their family or caregivers should be aware of.

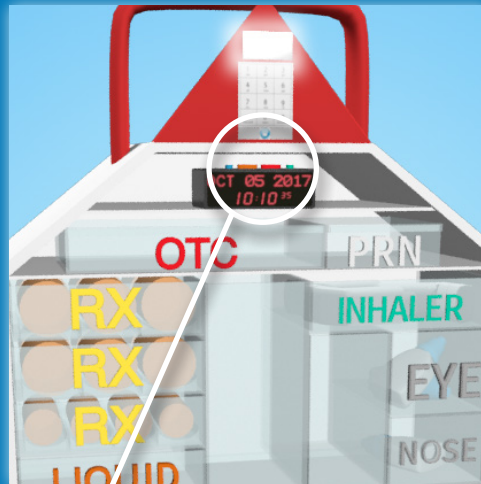

And for on the go, the portable water bottle with pill compartment top allows anyone to store their daily medicines and also have water on hand to take medication when needed.

Make your health a priority with the MedHouse™!

About the Developer

The inventor, Dr. Christina T. Wachuku of Palm City, FL had an idea for helping people with the complexity of taking medications. Christina contacted the Mars Rising Network and had a provisional and design patent application filed and had the invention designed properly so that she may see success with this great idea and turn it into a real product. She is actively seeking a company that would have an interest in licensing the product for a royalty.
