

Introducing the

Table Urinal Holder

“A convenient and sanitary solution”

TARGET MARKET:

- Hospital patients or those at home with limited mobility.

FEATURES:

- One button adjustable height.
- Wheels with independent locks.
- Indentations for easy placement of urinals in different orientations.

PATENT INFORMATION

A provisional and design patent application has been filed as of May 2018. The patent search was performed by The Mars Rising Network. It was concluded that there is nothing similar to this product on the market, which means this unique device could be patented and used by hospitals everywhere.

SUMMARY

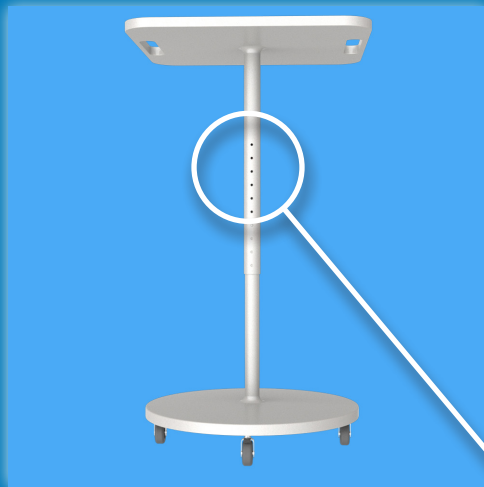

The **Urinal Table** is a much needed utility for hospitals. Currently, patients who require a urinal during their hospital stay must either keep it in their bed with them, place it on the table where their food will be delivered during meal times, or else place it on the floor. Many patients requiring a urinal are not able to get out of bed, or are at risk for falls. Placing the urinal on the floor is

not the best course of action for a recovering patient. The Urinal Table provides a place to store both used and unused urinals while recovering without adding additional stress and while also keeping other areas, such as food trays and the bed, sanitary.

The Urinal Table features three indentations specifically molded to the shape of the urinal. Two of the indentations are for when the urinal is in a prone position, while one is when the urinal is being kept upright. These indentations keep the urinals from sliding around and tipping over if the Urinal Table needs to be moved.

The Urinal Table also has the ability to have its height adjusted so that it can accommodate beds that are raised or lowered in the hospital. A simple peg can be pushed to adjust the height with holes at one inch increments. This means that the Urinal Table can be adjusted to about any height to ensure the patient can reach the table while remaining comfortable.

The **Urinal Table** has wheels to make it easy to move. Each wheel features a wheel stop to lock the wheels in place to keep the Urinal Table from moving out of reach by accident.

About the Developer

The inventor, Carol Blackwood Young of Apollo Beach, FL had an idea to help those in hospitals or at home who have restricted mobility. Carol contacted the Mars Rising Network and had a provisional and design patent application filed and had the invention designed properly so that she may see success with this great idea and turn it into a real product. She is actively seeking a company that would have an interest in licensing the product for a royalty.
