

Introducing the

Flange Master™

“no more difficult to remove flanges”

TARGET MARKET:

- HVAC technicians
- Anyone working with pump flanges on a regular basis.

FEATURES:

- Works in difficult locations
- Can be used with adjustable, end wrenches, pipe wrenches and sockets
- Small and easy to store

PATENT INFORMATION

A provisional and design patent application has been filed as of July 2017. The patent search was performed by The Mars Rising Network. It was concluded that there is nothing similar to this product on the market, which means this unique yet simple to use tool will be welcomed in the HVAC industry

SUMMARY

Being an HVAC technician you come to expect most projects to not go perfectly but sometimes you can run into situations

where there is no tool or reasonable way to remove a part. Pump flanges can be just one of those things as they need to be turned but there often isn't room to get a grip on it. Sound familiar?

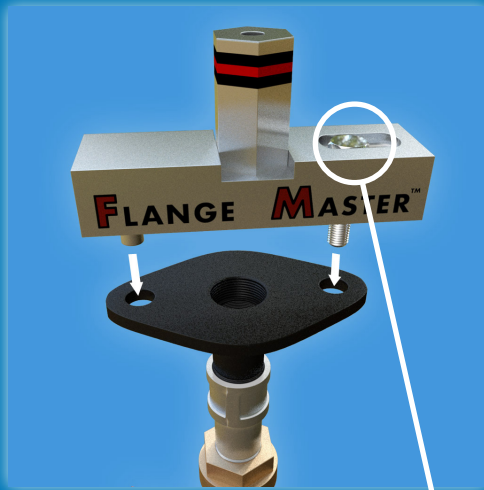

The **Flange Master™** is a tool used to install or remove a pump flange from a section of pipe.

The process is quick and simple. Set the Flange Master™ on the pump flange, run the bolt through the Flange Master™ and flange, tighten the nut on the bolt (finger tight is all that is necessary) and it's ready to go!

What makes this tool an easier way to remove/install flanges is the large surface area available to attach your favorite tool, a full 1-1/2, standard flanges have only approximately 1/4" to 3/8" to grip onto.

Also the tool is slotted at one end making it fully adjustable to work on standard flanges or high velocity (which are wider).

This tool also works in any position: upside down, right side up, even sideways since it bolts onto the flange holding it firmly in places.

Adjustable for different sized flanges

About the Developer

The inventor, Robert Shields, lives in Mason, MI and had an idea for removing flanges in hard to reach/tight areas. Robert contacted the Mars Rising Network and had a provisional and design patent application filed and had the invention designed properly so that he may see success with this great idea and turn it into a real product. He is actively seeking a company that would have an interest in licensing the product for a royalty.
